

Thus along with basic pathology, causing death, other signs of height illness show up morphologically (cerebral oedema). It is necessary to acknowledge that pathologic description of alpine hypoxia is studied not enough, requires a deep study and systematization both in the plan of tharato genesis and determinations of direct reason of death. Special this is important at combination of trauma and signs of development of mountain pulmonary oedema, mountain cerebral oedema.

## **SYSTEM TASKS OF MINIMIZATION SOCIALLY DANGEROUS DISPLAYS OF PAEDOPHILIC CONDUCT IN INFOMEDIA**

The informative relations are relations which arise up concerning satisfaction of informative necessities of citizens. Activity of the state concerning promulgation of any materials also can be acknowledged as informative. From one side Law of Ukraine "About defence of public moral" forbids a production and appeal in

Ukraine in any form products of pornographic character. A legislator suggests to consider any material objects and other products, maintenance of which is the detailed image of anatomic or physiological moments of sexual actions or information of pornographic character. From other side there is a problem of excessive informative

distribution of show of both "soft" erotic episodes and directly acts of sexual violence, which are demonstrated on television and opened sources (popular magazines, sex-shops, DVD, Internet).

Necessity of the interdisciplinary approach to study of paedophilic and incest conducts practically was not examined with systems approach, taking into account clinical sexology, criminology and psychological factors. Paedophilia becomes an object of international business today, purchasing the signs of the international organized crime. Last years latent paedophiles more frequently get to the sphere of advertising, business, mass medias, art, politicians and especially- in the world of Internet. We consider that it is necessary to revise some medical and legal criteria of estimation of perversion.

We notice that all of array of criminals which accomplish paedophilic actions is divided into 5 basic groups: 1) persons of young age, which committed paedophilic actions under influence of alcohol in the absence of sexual perversions; 2) persons of different age groups which come in contact with 13-16-years-old teenagers on perceptible basis, on a voluntarily consent; 3) persons which accomplished paedophilic actions in regard to relatives; 4) elderly persons, with a psychoorganic syndrome; 5) persons which suffer perversion in form paedophilia.

Paedophilia is breach of appetencies, that takes form of necessity of sexual relationships with children. There are not clear age scopes of sexual partners at paedophilia, that simply testify to presence of such perversion. It should be taking into account that age scopes can change depending on cultural, religious, geographical features. Therefore age of paedophile can be from 15 and higher, and age of his (her) victim - 12 years and below. Some authors mark that sexual abuse to children is any sexual interrelation with the child of person which more senior than such child on 5 years and more, thus as with the use of violence and without him. In some advanced studies paedophilia is designated as paraphilia, maintenance of which is sexual appetite to the children which did not attain 13 years [1, p. 7].

Paedophilia can show up as the unbur-

dened sexual intercourses with children or in the perverted forms with the use of violence, up to murder of children. At the same time, separate authors mark, for women paedophilia is observed considerably rarer.

Passion of paedophile to the children is caused, as a rule, by arising up organic defeats: from the age changes of cerebrum; as a result of traumas of cerebrum or expressed alcoholism. Approximate to 40-50 years "future" paedophiles were psychosexually indifferent to the young persons, and pathological appetite appeared for them unexpectedly, thus and for them. The persons of this type are intellectually limited, and sexual appetite to the children for them is often connected with exhibitionism. But nevertheless, as a rule, they are not too dangerous: are not capable for secrecy, debauch actions with children accomplish practically on eyes circumferential, therefore quickly reveal and nail on charge. Most researchers underline, that exactly paedophiles of this type present the apex of iceberg, obvious to everyone. However, unfortunately, in sign of law enforcement authorities 5% paedophiles get only, and exposed to punishment yet less than 2%. We will underline that a ponderable fight is conducted no more than in the 10 developed countries, and in the countries of Central and Eastern Europe they operate practically with impunity. In obedience to American statistical information among convict for sexual crimes about 45% (approximately 500 persons on a year) are paedophiles.

In English-language literature of the last years the problem of sexual violence comes into a question in childhood as a basic factor of forming of aberrant sexual behaviour in regard to minor (cycle of "victim-to-victimiser") [2]. Essence of this conception consists of that sexual violence in childhood is the basic factor of origin of anomalous sexual appetite. However in addition to this some researchers criticize this theory that it does not take into account influence of nocifensors which hinder forming of deviant conduct.

Some authors assert that paedophiles is "frightened" by a credible or possible future sexual closeness in a greater degree, what rapists of

other grown "man" categories [3]. But the results of numerous researches testify that some paedophiles feel more comfortably and safely exactly near children.

It is necessary to mean that in the numerous cases of carnal knowledge's with persons, which did not attain puberty, criminals seek out and elect on your own such professions, positions and employments, which would allow them constantly communicate and be with children, seek out among them potential partners for satisfaction of libido. Speech goes about the teachers of schools, leaders of different groups for children, trainers of sporting establishments and schools etc.

It is possible to talk about two cardinaly different types of paedophilia. In one case in its basis there is certain authentication with a child and fixing of attention on him as on the uniquely possible sexual object of appetite. In other case speech goes about undifferentiated perception which is accented only on some extreme descriptions of object, that assumes the certain variety of entity selection and eliminates co-operating with a normal mature heterosexual object [4].

There are classifications of sexual actions in regard to minor, which are based on the rich in content side of illegal actions. In soviet literature began of XX it was accepted to select three groups of "criminal persons" which commit sexual actions with minor one, in obedience to their actions are: 1) libertine; 2) persons which enter into the sexual relations with very young people without defloration and perversions; 3) seduce, thus the sub-group of homosexual seduce was separately selected in this group.

Similar typology it is possible to meet and in foreign literature. Tricking into the analysis of points of view of foreign researchers to the single denominator, will select 5 groups of criminal paedophilia: 1) paedophilic actions which are committed by young intoxicated criminals, but in the absence of sexual perversions; 2) paedophilic actions, committed to relatives, where an important role played chronic alcoholism and primitivism of criminals; 3) paedophilic actions, when relatively young criminals live together with 13-

years-old girls on a voluntary basis; 4) paedophilic actions, based on deep psychosexual deviations, including homosexual paedophilia; 5) paedophilic actions which are committed by elderly persons (elder 60 years), mainly on a background a psychoorganic syndrome.

The last russian and domestic psychological researches refined that persons with disorder of sexual appetite in form paedophilia distinguishes the low level of masculinism and base sexrole identity. For paedophile off's homosexual orientation less feminity of base sexrole identity comparing to heteroorientative persons. For homosexual paedophiles negative emotional attitude is formed toward a "woman", here image of "woman" for them falls short of the picture of "sexual partner". In addition, at the last category marked notpersonification perceptions of image of "child". An overcompensation a masculine role is inherent such persons due to directive options and independence from circumferential next to the high level of autoerotic tendencies. And for heterosexual paedophiles quite reverse, lowimagination appeared characteristic relative autoerotic tendencies.

So, summing up the first part of this publication, will select the basic types of paedophile: 1) immature (fixed) paedophile is a man which demonstrates long exceptional advantage of children as both sexual and social partners; 2) regressive paedophile is a man which had wholly normal relationships with adults, however in course of time with the senses of impossibility and lack of self-confidence of confidence commuted on children as on partners in sexual and social relations; 3) paedophile-exploiter - the grown man, which searches contacts with children exceptionally in an order to satisfy the sexual needs; 4) aggressive paedophile (with sadistic tendencies) is a grown man which is brought over to the children by exceptionally sexually-aggressive aims (realization of violence) [5, p. 246].

Complications of study of incest conduct foremost connected with considerable lateness. Children report about it reluctantly, therefore indicated criminal acts rarely result in the crimi-

nal proceeding. In obedience to one information the incest conduct of parents is most widespread in relation to native, but not stepdaughters, in obedience to other information - very young girls are exposed to the most risk from the side of stepfather. Although meets and casual form of incest which is carried out, as a rule, by the drunk father or stepfather.

From data of B. Shostakovicha a most risk of propensity of incest is at age from 8 to 12 years, sometimes he accepts character of long cohabitation, carefully hidden by both sides [6]. Such situation requires families to keep secret from members. Similar families live in the reserved world, practically not having contacts with external surroundings which in same queue self walks around such families. A lot of parents which enter into incest relations with the use of violence took away the models of incest conduct from the domestic micro society, so the load of incest was passed "by the inheritance", but not at gene, but on purchased (micro society) level.

In obedience to foreign information from 80% till 95% incest rapists of minor (girls and boys) make men. Only in 3% cases rapist are women (in the case of incest relations between mother and son). Although, to addition to this we found out that 60% teenagers were exposed to sexual abuses from the side of nominal women [7]. The last were victims such the abuses in childhood, that could not be designated on their to further psychosexual development. That once again underlines the purchased character of incest paedophilia.

A domestic hierarchy in incest families is enough steady. Incest of father with daughter takes a place usually in families, where dominant position is occupied by father, while sibling-incest or incest of mother becomes possible only in case that a father in own family occupies inferior, passive position. In addition, incest relations in families are possible to describe as a sign of "domestic dysfunction", that begins long before the origin of incest, and at which similar relations are the mean of maintenance of its integrity and prevention of disintegration.

Most incest raping of children is fixed in daytime, and on an evening and night is accordingly 28 and 14%. Only in one case, from our empiric material which makes more than 300 materials of criminal cases about different sexual crimes for 15 years, such crime is committed was in the morning [8].

Clearly, that establishment of exact indexes of latentness of sexual crimes, all the more, that which contain offtypeness of the displays, it is impossible for many reasons. That's why we can speak only about authenticity of scopes of latentness. If responsibility for the sexual crimes of violence carries no more than every third criminal, for a feausance paedophilic and incest actions this per cent is considerably below.

We will select the social-characteristical features of paedophile-rapist: 1) majority are not strangers - in nine from ten cases paedophile-rapist was acquainted with a victim; 2) exactly paedophile-rapist is initiator of sexual actions; 3) paedophiles-rapists utilize different receptions in an order to seize and compel the victims to be quiet: threats, force, gifts, cruelty and other forms of physical and psychological influence; 4) persons which accomplish incest actions do not differ from other people neither the level of education and intellect, nor attitude toward religion, nor line of business nor psychical status; 5) in most cases sexual violence takes a place in the context of minimum temporal mutual relations between a child and paedophile-rapist (we will name it a syndrome of rapid acquaintance) who exploits needs and fears of child.

We consider that new interpretation is requires rather new problem, as child's sexual tourism. It is the commercial sexual use of children by people who arrive from the country in other, as a rule, less developed, for participating in sexual relationships with children. Sexual tourism is satisfied widespread the extremely negative phenomenon in the whole world last years. It consists in satisfaction of sexual needs, and also for making cheap pomographic products foreign citizens arrive in countries with a hard economic and social wicket. So, by the estimations of inter-

national organizations, only in 1999 arrived to Costa Rica about 5000 tourists with the purpose of sexual exploitation of children [9].

In June, 2008 Centre of Social Communities Ministry of Home Affairs of Ukraine reported that paedophile was detained in Sevastopol. 38 years old local habitant with 2000 to the moment of detention, doing professional photo and video of solemn measures, met with minor, as a rule, from unhappy families, with which met afterwards, offered to them additional earnings or material fee for making photo session with their participation, including naked.

In future man raped children, fixing events on photo- and video camera. By investigation, of revealed, that this citizen on a previous concert with third persons which lived on territory of the foreign states, organized an internet site, situated outside Ukraine. There he placed turned out photo and video of pornographic content, for what from 2005 got for 1 thousand of dollars monthly as money rewards on opened by him account in one of banks of Sevastopol.

In April, 2008 in Vinnytsia oblast employees of militia of arrest 35 years old man, suspected in depravation of minor. On a report Centre of Social Communities Ministry of Home Affairs in Vinnytsia oblast, habitant Shargorodsky district two years ago began to live with a woman which had three under age children from previous marriage. Suspected, before three times judge for thefts, take advantage that woman worked by a watch method on building objects in Kiev and to on two weeks in a month was not at home, began to seduce 15-years-old daughter of neighbour, and than two stepdaughters and stepson. Children were afraid to say some of adults about violence, because paedophile threatened to kill them. After some time the mother of victims learnt about everything and appealed to the militia.

In February, 2008 country shaked report that maniac-paedophile handles in Donecky oblast, on the account of which at least 14 victims. Thus all of them - girls in age from 5 to 14 years. Criminal by force tightered them into the car, injected special type of anaesthesia) and then

took sleeping children out (to forest-plantation), where raped them. By the way, the first crimes were fixed yet the last year summer.

In February capital law enforcement workers detained a 47-years-old man who raped the daughters (7 and 13 years) and took off it on video. At suspected, besides video cassette, withdrew 59 pictures and 19 shown films of pornographic maintenance, where the stages of rape were imprinted with participation girls.

Was not "poor" of paedophiles and last year. In May, 2007 in Zaporozhsky oblast militia arrested sexual maniac which during four months of did attack on minor. Victims of attacks of were 5 girls in age from 9 to 14 years. As a rule, malefactor tracked them on the way from school to home, attacked in entrances and threatening by a knife, compelled to enter into sexual connection. In June in Borodyansky district of Kiev oblast the workers of militia detained a 47-years-old local habitant, who being intoxicated, raped a 12-years-old girl, whereupon smothered it.

It is possible to add this sorrowful list by other crimes, accomplished by domestic paedophiles, however this is unnecessary to turn our attention that for "help" to him to Ukraine run and foreign.

In 2007 Ukrainian National office of Interpol detained on territory of Ukraine 44-years-old citizen of the USA Stephen Michael Konklin, entered to ten of the most known paedophiles of this country. By the first time he was arrested for paedophilia 25 years ago, and since more than 20 times he became the object of police reports. Found Stephen in town Skvira of the Kiev oblast, by the internet he met with habitant of this distnicy center and came there like guests. It is curiously, that woman worked at school, and her mother - in a children's home. For lack of agreement about extradition between two countries to detain Konklin on territory of Ukraine appeared impossible. Employees of National office of Interpol and FBI at the embassy of the USA in Kiev of offered him immediately leave for home, that he did. In New York he was arrested straight in John F. Kennedy International

Airport. In a that year the employees of Odessa militia on information of Interpol detained the citizen of Estonia, searched for raping of girl at age of 8 and 11 years.

Taking into account a generous amount of children-orphan in Ukraine, children of street and neglected children, and also attractiveness for a child to earn money, it is possible to forecast substantial growth of criminality in this direction. Half of children, victims of foreign trade of people, more frequently drove out through nearby countries (Russia, Moldova). Especially as, from data of workers of Ministry of Home Affairs of Ukraine, the facts of sexual tourism are already fixed in Ukraine with participation of the citizens of France, Sweden, the USA and some other countries. There are a lot. Of sites and addresses in the Internet where possible to get cheap a child for satisfaction of sexual perversions. That's why connection takes a place over the internet and the search of children is carried out by the Ukrainian citizens, very often also minor, from unhappy families. Unfortunately, prove similar crimes is practically impossible, for example, made pornographic production is saved on digital transmitters which in the case of necessity liquidated during seconds. That material proofs are destroyed, and criminals remain unpunished. Victims give testimonies very seldom.

Many experts considerably lay on the results of interrogation. It resulted in suggestion to develop other criteria which would be utilized in combination with the results of interrogations and standard personality tests. There are false negative and positive authentications of children in judicial practice which potentially were exposed to sexual violence, to the present such methods are not developed and law enforcement authorities work, as well as a lot of years before, "on break a secret".

It is accepted to consider that women in general are more inclined to believe in the testimonies of children about sexual violence, than men, who often skeptically behave to the similar testimonies. Women more frequent, than men are ready to trust information, to based on ears.

Women support children in a greater degree, who pull out laying to sexual violence [10]. Therefore, the estimation of veracity of approval of child about sexual violence in the process of interrogation by the analysis of maintenance of verbal statements remains a "white spot".

We should underline that recruiters entice children not only from poor but also from happy families. Such children decide to leave for a border on purpose improve the financial position and position of the parents, find confidence and independence, to see the world etc.

According to ties we should form new model of defence of rights of children from sexual exploitation.

There are pre-conditions to assert that a rapist-paedophile creates information which is got from different sources, and also models, systems of persuasions and values which justify violence. So, it is further suggested briefly to consider the informative aspect of problem of pathosexual victimisation children.

A lot of offences is determined availability of grant of the domain names. To the informative content of sites, it is possible to meet both "ordinary" pornproduction and the opened propaganda of sexual violence. Offences which are related with the use of web-chats touch mainly distribution of child's pornography, adjusting of connections between criminal organizations, utterance of the sexual fantasies of paedophiles.

For investigation of such offences is needed information about provider, which gave the proper services, name of chat, internetaddress of offender, time of feasance of offence and possibility copy of chat on a diskette. For finding out of circumstances, related with the use of e-mail, it is necessary to set: who is internet provider? Is there a copy of e-mail, including the complete heading? What electronic address of offender?

To one of features of committing a crime in the Internet is presence of a few places of commission of one crime. It is a site of computer of victim and location of computer where did illegal actions. In addition, proofs of certain offence can be both for the provider of criminal and for the provider of suffering side.

With the purpose of timely exposure and prophylaxis in the Internet of distribution of child's pornography it is necessary widely utilize associative filters, conduct measures on the settlement of viewing of electronic information, fixing of web-surfing (search of the information in the Internet) the proper special subdivisions of law enforcement authorities which until now are not present, and a problem needs the proper legislative settlement.

Specific of exposure and lead through of investigative-criminal actions in the Internet also requires development of the special methods, thorough knowledges of modern information technologies, presences of the proper vehicle and programmatic providing, increase of level of efficiency of international cooperation for investigation of cases of distribution of pornographic products.

Makes sense to dwell on the methods of paedophiles, operating in a cyberspace, which are taken to the following. As a rule, at first paedophile conquers the trust of child, showing sincere participation and interest to his businesses and problems. After it he tries to procure an electronic, postal address or telephone of the set victim number. Then he sends him pornographic materials, which confirm that sexual relations between to the adults and a child are wholly normal and natural. Farther there is only the last step - setting of meeting.

Popular internet provider "America Online" (AOL) made an effort mark off children from computer paedophiles. So, in particular, for watching of suspicious and improper dialogs in chats which are intended only for children, in 1997 is put the special "guard" Trebilcock. In addition, parents who worry about dominant influence of pornography in a cyberspace, is possible to advise a program, which executes the function of filter, intended for blocking of access of children to the sites with improper images and vulgar words. Such program sure will help to limit viewing of pornographic sites by children, but, unfortunately, remains the unreliable enough protecting from paedophiles which visit child's chats.

Such rules of safe conduct are offered in Internet for children: 1) I don't give personal information (name, age, address, telephone number, number of school, job of parents) without the consent of parents; 2) if I will obtain information, which will compel me to feel uncomfort, I at once will tell parents or teacher; 3) my parents know all subscribers, with whom I communicate in the Internet; 4) I will never disagree to meet with a man with which I met in the Internet, without the preliminary consent of parents; 5) if I will make a decision to meet with this man, it will be populous place, and I will invite on such meeting of one of the parents; 6) I will never deport the photos a man with which I met over the internet, not consulting with parents; 7) I will not reply to letter or requests which cause sense of discomfort or shame for me; 8) together with parents we will set my rules of work in the Internet: burn-time in the Internet and sites which it is settled me to visit [11].

Eventually, system of the individual warning of such sexual anomalies as paedophilia must be built on dependence of motivational influence of negative approvals on the stage of socialization. An individual prophylaxis must be directed on two independent, but associate between itself, object: macrosocial and microsocial.

While "diffuse" paedophilic displays did not purchase the function of permanent necessity, bringing such subject satisfaction, in order to stop a man from implementation of such actions application of punishments of "middle level". Clearly, that such conditional "psychological trap" requires lead through of system measures structural-containing reorganization in content of alteration of motivational sphere of such person, as in future the level of counteraction, to be adequate to pathological appetite, must swiftly increase.

With a large carefulness it is needed to free paedophiles which ask to cure them. Paedophiles can cheat authorities in that they cured allegedly, in order that they were freed. Only of long duration treatment and looking after their conduct can become proof of complete convalescence. But some paedophiles never being able to be cured. That's why it is impossible to

produce from the system control (prison or after-prison) of pedophile who did not leave off to be danger for society and after departure of term of the appointed punishment, potential victims and, in to eventual result, - for itself.

For example, in France, presently develop a bill about chemical castration. Acceptance of similar measures is initiated by french president Nikolya Sarkozy, who is a supporter of chemical castration of pedophiles. For toughening of punishment of pedophiles is being planned creation of the special clinic, where perverting will forcedly intern, on what also insists the minister of justice of Spain. It is "impossible to abandon predators-individuals which can put to death a child or pang his life", - Nikolya Sarkozy declared.

Pedophile will be put before a choice - or live behind bars forever, or being chemical castrat which fully will deprive him opportunities to have sex. And the sexual pervertings, who wants being free, must pass a careful medical inspection in the special hospital of prisonous type, which authorities of France going to build already in two years in the suburb of Lion. To free even emasculated pedophiles will be release only since physicians for certain will set the fact of their safety for circumferential. If criminal of won't do put by doctors matters, he will be sent back in prison. Those, who will be lucky to abandon special hospital, must carry electronic bangles, indicative their location, and regularly register in the police. In addition, in decision of president Sarkozy, pedophiles will lose right on early release from prisons and will be under an obligation to conduct the complete term of punishment, appointed a court behind bars.

Nevertheless, while France thinks above suggestion of Sarkozy, in Great Britain in August, 2008 already decided to enact chemical castration of pedophiles in practice. It will be conducted on voluntarily basis among pedophiles, being released from prison. Preparations, which will accept patient, down depressed, libido, and return sexual desires of patient to the level of 8-years-old child.

In the context of the problems expounded

in a report suggest to consider more generalized suggestions of the theoretic-applied character.

1. It is necessary to forbid the opened translation of the pornographic or contiguous with them programs on television, strictly to control a similar product output with the wide bringing in to this work of law enforcement authorities, to remove the show of deviant sexual displays from the Internet, especially child's pornography.

2. To enact the use of monitoring of sexual aggression, uniting diagnostics and correction critical and near to the critical conditions, on the basis of what be able to accept decision of necessity or expedience of correction (social task) and will be determined its kind and level (medical task). It will be able to promote the level of social control, as information which will act during his lead through, from one side, will let to provide present possibilities with the purpose of individualization, and from other side will foresee possibility exactly to define time, character and dosage of necessary correctings influences.

3. A sexual health level is closely related to quality of education, and including sexual education. That's why we offer on the state level to propagandize advantages of healthy method of sexual life and inculcate employments on a victimological prophylaxis (forming of protective dominant, especially for children, girls, women). We consider that taking into account domestic and world experience, to the development of such single conception must be attracted the specialists of different type such as doctors, teachers, lawyers, psychologists, workers of mass medias.

4. Enact the long-term program of influence and minimization of the "base-line" phenomena which come forward additional stimulator of pathosexual victimization, such as a conduct of parasitic way of life (cadging and vagrancy), unmedical use of drugs and other medical preparations (toxicomania), abuse of strong waters, by the special part what excessive alcoholization of young people, social illnesses (venereal, HIV and AIDS), prostitution (masculine, womanish, prison, child), migration (legal, illegal), trading children.

5. For watching of displays of pedophilia and other especially dangerous displays of sexual anomalies in the Internet, by analogy with motor-car highways, the permanent "criminology patrolling" of cyberspace is needed.

6. Experience of creation and functioning of joint investigative operative groups would assist development of more close intergovernmental collaboration, important determine what work would become on rapprochement of national criminal and penal statute, and possibly creation in the prospect of base of legislation for all states-members of the Commonwealth of Independent States, that would be instrumental in providing of single practice of production of pre-trial investigation of criminal cases, including serial crimes which are committed by pedophiles.

At the same time, in the conditions of modern political situation in Ukraine and by development of national informative war with the purpose of the opened introduction of anti-russian moods in an active phase, any integration of law enforcement authorities of the Commonwealth of Independent States, where front-rank practical experience of organs of criminal justice of Russian Federation can become key basis of these innovations, to deep regret of those reasonable citizens of Ukraine, for which categorically unacceptable modern orange "nationalistic perversions" and aspiration of dull printing-down of western stereotypes in a law-enforcement sphere, in the near time hardly possible.

Such specialized forming under the conditional name "Hunters for maniacs" would operate jointly with existent law enforcement authorities on all of territory of the concrete state of the Commonwealth of Independent States, not submitting local leaders, and also on territory of other countries in composition the intergovernmental mixed investigative operative groups, about what we in future will continue the series of publications in this magazine.
